

Stove Cooked Steel Cut Oats

Directions For Those in Phase 1 IBD-AID

TIPS:

1 What is IBD-AID? IBD is irritable bowel disorder. AID stands for anti-inflammatory diet. These steel cut oats cooking directions are designed to make cooked steel cut oats more digestible and nutritionally helpful for those just beginning to treat their IBD under the care of a physician and/or nutritionist.

2. **What are steel cut oats?** Steel cut oats are whole oat grains (also called “groats”) that have been cut, without being processed or cooked first, into 2-3 pieces by sharp metal blades. Rolled oats, on the other hand, are cooked before being rolled flat, which both shortens cooking time at home but also slightly decreases their nutritional value. Here’s a picture showing the difference between rolled oats (left) and steel cuts oats (right).

3. **Why are steel cut oats preferable to rolled oats?** It all comes down to processing. Rolled oats, as mentioned above, are hulled (outer skin removed), cooked (either or both

steamed and/or toasted) and then rolled flat, which makes them easier to cook but at the expense of some nutrients and other factors. Steel cut oats are not preprocessed and that makes them a stronger *prebiotic*. Prebiotics help beneficial “good guy” bacteria in your gut that help keep you healthy by reducing inflammation throughout the body. In addition, because of their higher soluble fiber content, steel cut oats keep you full longer and help to lower triglycerides and the production of small, dense low-density lipoprotein (LDL) cholesterol.

4. **Steel cut versatility and ease.** Steel cut oats can be enjoyed both in sweet and savory dishes. In order to save time, I recommend cooking a good quantity of steel cuts oats (as shown here), refrigerating them, and then adding them easily to recipes of your choice to add protein, fiber and nutty flavor.

Cooking time, specifically for those in phase 1 of the IBD-AID: 45 minutes to 1 hour

Needed
(for 4 cups of steel cut oats)

1 Cup (8 ounces) Steel Cut Oats

6 Cups (48 ounces) Water

Dash of Salt

Medium-Sized (3 - 4 quart) Pot

Large Spoon

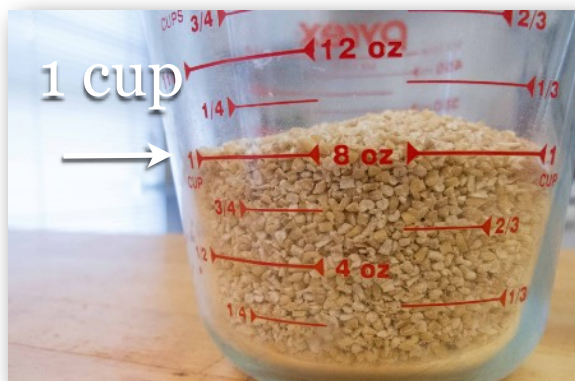

Measuring Cup

Bowl

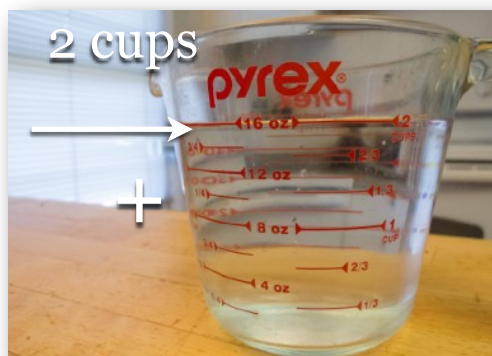

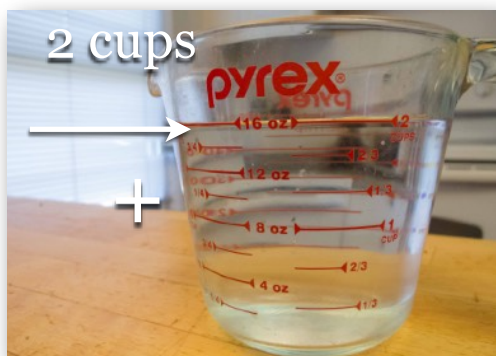

Timer

1. Measure **1 cup (8 ounces)** of steel cut oats, and pour the **oats** into a bowl.

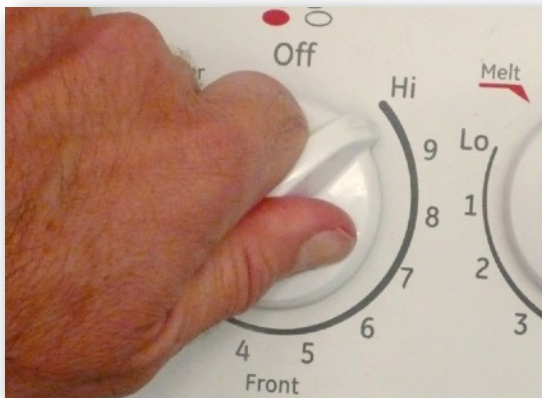

2. Measure **6 cups (48 ounces) of cold water** and...

...add the **water** to a medium-sized pot.

3. Put the pot on the stove, turn on the burner heat to HIGH and add an optional **dash of teaspoon salt** (about as much as shown).

4. Cook until the **water** comes to a *rapid, big bubble boil* as shown in the picture on the left below (not as shown in the picture on the right below).

When the **water** comes to a rapid, big bubble boil, add the **steel cut oats** to the pot, turn the burner heat down to LOW or SIMMER, and set a timer for 45 minutes.

5. When the timer sounds, check the **cooked steel cut oats** for doneness by stirring the **oats** with a big spoon and...

...checking for desired **oat** consistency by seeing how they slide off a big spoon as shown below.

If your **cooked oats** are not as thick as you would like them, keep cooking them at 5 minute intervals until they are cooked to desired thickness.

6. When the **steel cut oats** are cooked, either use them as is or...

...let them sit in the pot on a cool burner for at least 20 minutes until they are safely warm to the touch. Then spoon the **cooked steel cut oats** into a container and store them in the refrigerator for up to a week for use in recipes of your choice.
